

# Linearity

## Presentation

Introduction, Vision and  
Opportunities of Linearity

# What is Linearity

Linearity is an Expert Advisor (EA), an automated trading software capable of operating 24/5, following mathematical and algorithmic logic, without any manual intervention.

It is based on the reliability of the FP Markets broker and, through this platform, we provide a copy trading system that allows anyone to connect to our main account and automatically replicate, in real time, all the trades carried out.

# What is CopyTrading?

Copy trading allows you to connect your trading account to that of a trader or Expert Advisor (like ours), automatically replicating all their trades.

- ▶ **No skills required:** No trading experience is required.
- ▶ **No installation:** the whole process is already configured.
- ▶ **Automatic trading:** every position opened from our account is
- ▶ **replicated in real time on yours.**

You maintain full control of your capital at all times and can stop the copy trading service whenever you want.

# What are Brokers?

A broker is the intermediary who allows access to the financial markets.

For our service we use FP Markets, a regulated Australian broker, recognized for its reliability and fast execution.

To participate in our copy trading system, you need to open a real account using our invitation link (IB).

This way you can connect directly to the strategy and replicate its operations.

# FPM Trading

**fpmtrading**

FPM Trading is an international broker specializing in Forex and CFDs, regulated by CySEC (EU) and ASIC (AU).

It is authorized to operate in Italy under the supervision of CONSOB, while maintaining its headquarters abroad.

This requires investors to comply with tax requirements such as income tax returns, RW form, and IVAFFE tax.

The broker stands out for:

Advanced trading platforms

Wide range of financial instruments

Protection of client funds

CONSOB (National Commission for Companies and the Stock Exchange): Italy's independent public authority that ensures transparency and fairness in financial markets, protecting investors and regulating listed companies, intermediaries, and financial instruments.

# How does it work?

Linearity performs algorithmic trading on the XAU/USD (Gold vs. US Dollar) market using an automated strategy developed using mathematical logic.

The system opens and closes trades 24/5, based exclusively on rules encoded within the Expert Advisor (EA).

This means a total absence of emotional decisions or manual intervention: each trade is managed by an algorithm that constantly monitors market movements.

Strengths of the Linearity system:

Exclusive trading on the XAU/USD market, one of the most liquid and volatile assets.

- Dynamic and intelligent risk management, without fixed stop losses.

Presence of physiological drawdowns, but with a strategy designed for recovery over time.

- Mechanical and tested system, no extreme scalping or manual trading.
- Sophisticated news filter that interrupts trading activities during economically significant events.

The algorithm has been rigorously back-tested on years of historical data (available on the website), ensuring reliability and operational consistency.

In short: Linearity offers automated, intelligent, and adaptive gold trading, aiming to generate consistent returns over the long term while minimizing human intervention and maximizing operational efficiency.

# XAU-USD

XAU/USD represents the exchange rate between gold (XAU) and the United States dollar (USD).

It is one of the most popular financial instruments, used by both institutional and private investors as a safe haven during times of economic uncertainty.

The price of gold in dollars can be influenced by several factors:

- ▶ **Strength or weakness of the US dollar:** A weak dollar tends to push up the price of gold and vice versa.
- ▶ **Inflation:** Gold is often considered a hedge against rising prices.
- ▶ **Interest rates:** Low rates make gold more attractive than other investments.
- ▶ **Geopolitical events and crises:** Wars, international tensions, and financial crises increase the demand for gold as a safe haven.
- ▶ **Industrial demand and jewelry:** Changes in global demand can impact prices.

# How to Get Started?

Are you interested in joining LinearityFX?

Follow our step-by-step guide and, in just a few minutes, you'll be able to access all the benefits reserved for members, with the aim of generating consistent profits over time.

For more information, you can visit the official LinearityFX website or go directly to our complete guide:
